

Alphabetical list of common diseases

Notes on using the Incapacity Reference Guide (IRG)

- 1 The IRG is designed to tell you:
- the code number to record the incapacity on PSCS
 - the control action to take for the Own Occupation Test
 - the action to take when the Personal Capability Assessment is due
 - whether the incapacity is infectious/contagious
 - whether the incapacity indicates a pregnancy complication
 - whether the incapacity is, or may be, pregnancy related
- 2 If any incapacity is not recorded on the list:
- 1 record the incapacity on PSCS as code 0700; and
 - 2 seek advice from Medical Services (the reference type is **CU**). If you don't check, there is no way of knowing if you are taking the right action.
- 3 Remember that things like 'bereavement', 'looking after relatives' and 'broken

Notes on the column headings

Number

- 4 If the code number shown is 0700, PSCS (INCAP) will not recognise the incapacity and will decode to 'other specified incapacity'. You will need to enter any R4 or R10 control date in RP303 680. For all other code numbers the system will set the appropriate Own Occupation Test or Personal Capability Assessment control date. You will need to enter any R4 or R10 control date in RP303 680. For all other code numbers the system will set the appropriate Own Occupation Test or Personal Capability Assessment control date.
- 5 Self explanatory.

Control Own Occupation Test

- 6 If the Own Occupation Test applies, this column tells you whether control
- **R4** means refer to Medical Services after 4 weeks
 - **R10** means refer to Medical Services after 10 weeks
 - **Immediate reference (IR)** means refer straight away
 - **none** means no control action is required for the Own Occupation Test period
 - **See Part 5** means see Part 5 of the STB Guides

Control Personal Capability Assessment

7 If the Own Occupation Test does not apply, this column tells you when control action is necessary for the Personal Capability Assessment and when to begin the Personal Capability Assessment process:

- **R4** means after 4 weeks
- **R10** means after 10 weeks
- **Immediate reference (IR)** means refer straight away

Action when prompted to apply the Personal Capability Assessment

8 This column tells you what to do when you are prompted to apply the Personal Capability Assessment:

- **ensure that the Personal Capability Assessment applies**, rather than the Own Occupation Test
- **exempt refer to DM** – This means the customer is treated as incapable of work by the Decision Maker (DM) without having to go through the assessment or being referred to medical services
- **exempt refer to medical services** – This means the customer is treated as incapable without having to go through the assessment, but this requires confirmation of the customer's incapacity by a doctor approved by the Secretary of State
- **issue an IB113-DL/S (ref type CP)** – Potentially exempt (physical incapacity) – The customer may be suffering from a serious illness that means they can be treated as incapable of work without having to satisfy the assessment. The letter is sent to the GP to find out more about the customer's condition.
- **Issue an IB50** – Self explanatory
- **PTI – see part 33** – The customer may be suffering from a terminal illness that means they may be treated as incapable of work without having to satisfy the assessment. See Part 33 of the STB Guides
- **issue an IB113-DL/S (ref type CM)** – Potentially exempt (mental health incapacity) – The customer may be suffering from a severe mental illness that means they can be treated as incapable of work without having to satisfy the assessment. The letter is sent to the GP to find out more about the customer's condition
- **See Part 5** – This means see Part 5 of the STB Guides

Is the incapacity certifiable as infectious or contagious?

9 A customer is treated as incapable of work on any day they are excluded from working on the basis of a certificate supplied by a Medical Officer for Environmental Health showing they are under medical observation because they are a carrier, or have been in contact with, a case of an infectious or contagious disease.

10 They are not treated as incapable just because they are suffering from the disease.

Pregnancy complication – refer to DM

11 If the incapacity indicates a pregnancy complication, refer to the DM before considering

For MA/SMP purposes is the incapacity pregnancy related?

12 This gives an indication of whether an incapacity is likely to be pregnancy related. It is used to help DMs decide if MA/SMP should be put into payment six weeks before the EWC.

Incapacity Reference Guide

If the incapacity is not listed - refer to medical services for advice (reference type CU)

Number	Full description of disease	Control Own Occupation Test	Control PCA	Action when prompted to apply the PCA	Is the incapacity certifiable as infectious or contagious?	Pregnancy complication – refer to DM	For MA/SMP purposes, is the incapacity pregnancy related?
0001	Abdominal pain	R4	R4	Issue an IB50	No	No	Probably not
