

THE VACCINE-AUTISM DEBATE: WHY WON'T IT GO AWAY?

DAVID KIRBY, BESTSELLING AUTHOR

***EVIDENCE OF HARM – MERCURY IN VACCINES AND THE
AUTISM EPIDEMIC: A MEDICAL CONTROVERSY***

David Kirby, the New York based investigative journalist and author of the NY Times Bestseller, “Evidence of Harm,” will speak and take questions from the public during a free event at New York University School of Law.

**LECTURE AND Q&A
Thursday, June 26, 2008
6:30 – 9:00 PM**

**NYU School of Law, 40 Washington Square South,
Vanderbilt Hall, Tishman Auditorium, Ground Floor**

RSVP REQUIRED: kirbylecture@gmail.com

FREE AND OPEN TO THE PUBLIC

Among the subjects Kirby will address and take questions on:

- A recent case in the US Vaccine Court in which the government conceded that vaccines induced autism in one little girl, and updates on other cases.
- Growing evidence of a link between mitochondrial dysfunction and autistic regression, and case studies of several ASD children with mitochondrial issues.
- Current research underway at top universities on the connection between environmental toxins, mitochondrial function, oxidative stress, glutathione depletion, neuro-inflammation and autism.
- Declarations by US Presidential candidates that autism is epidemic and calling for more research into vaccines and mercury as possible causes.
- Recent studies linking ASD with heavy metals and contaminants in air pollution.

Kirby is a former contributor to *The New York Times* and a writer for the *The Huffington Post*. Mary Holland, Director of the Graduate Legal Skills Program, will host the event.
